DETAILED ACTION

Allowable Subject Matter

1. Claims 1-14 and 26 (renumbered 1-15 respectively) are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to show or fairly suggest a plurality of head-end controllers coupled to each server module of said plurality of server module via at least two signal paths, *wherein each communication between a head-end controller and a server module is coincidentally sent through the at least two signal paths* (emphasis added) as claimed in Claim 1. The closest prior art of record is Adiga et al (5,892,913). Adiga shows a plurality of head end controllers and server modules (fig. 3) but fails to show that each communication between the controllers and server modules is sent between two signal paths.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Delaney et al U.S. Patent No. 5,996,086 discloses a context-based failover architecture for redundant servers.

Ohran et al. U.S. Patent No. 5,978,565 discloses a method for rapid recovery from a network file server failure including method for operating co-standby servers.
